

Dear FCC,I am concerned about the continuing effort by various religious, governmental and private groups trying to control what we listen to on the radio. Just like TV, if you don't want to listen, watch or read something, simply change the channel, turn it off or don't read it, period, end of story. The continued effort to control what we listen to takes from our basic right to freedom of speach and is getting out of control. I agree with parental control, but as a paying member of the XM satelite family, I have come to appreciate XM's services very much. As you know traffic and weather broadcasts in metro areas are important. People need to know about whats going on. XM continues to meet these needs for me daily. I strongly support their efforts to provide me as a paying customer with quality commercial free broadcasts, including Traffic and Weather. I pay for the service because I want their service. Please reject NAB's petition 04-160. Respectfully JKD
